Worksheet 10a Year 1

Maths task- use your knowledge of sharing equally to divide the objects into equal groups. Use the cards on sheet 10b to do this.

You may need to use some practical resources to help you, or to check your answers. Below are some questions to think about after answering each question.

Can you explain why and how you know your answer is correct?

What did you do to work it out?

Could you have shared that number of objects differently?

CHALLENGE: Why can't you divide a group of objects by every number? E.g. 5 by 2. What happens if you do?
