

Share the Powerpoint about Pedro's pizza. Make sure that the children understand that when you half something, you split it into 2 equal pieces. Equal just means the same. Then cut out the following shapes out and cut them into halves OR draw a line showing half. If incorrect, talk about would they be happy if they got the smaller piece, is that fair? Correct them to show half then ask is it equal/fair now? Yes - both get the same.

Pedro is thinking about using different shapes for his pizzas! Can you show him how to cut these shapes into half too?
