

Share the strawberries between the 2 children. Remember when you share between 2, this is **halving**!

How many will they have each?

What else can you see that you can share? Use objects to help you share them out.

Check that you have shared them **equally** and **fairly**.

Challenge —What if there was another child at the picnic? Could you share the strawberries between 3 people fairly?

What if there was another squirrel? Could you share the nuts fairly between 3 squirrels?

What other numbers can you share fairly between 2? What numbers can't you share fairly between 2?
