

When you get a bag of sweets to **share** with somebody, you count them out to make sure each person has the same number of things. This is **sharing equally** and **fairly**. The best way to do this is to give 1 to each person, then repeat this until all the sweets have gone. Did you have any left over?

What other things do you share out at home? Do you share between 2, 3, 4 or more people in your house?

Practise sharing 12 things equally between 2 teddies. Then share the same things between 3 teddies and then 4 teddies. What happens to the number of items?

Now share these leaves fairly between the insects. Draw a leaf in a circle and then cross it out from the store at the top. This way you know you have shared them all.
