

## Worksheet 9 Year 1

Maths task: Division. This is the first time the children will have looked at division. To start with, we focus on sharing a large group into smaller groups (sharing them equally). This is very similar to what they have already done for multiplication. We won't be using the divide symbol for now.

**Task 1:** Using resources you can find around the house, on a walk or in the garden (leaves, twigs, LEGO bricks, pasta, counters etc.) make a collection of one item into a group no larger than 20.

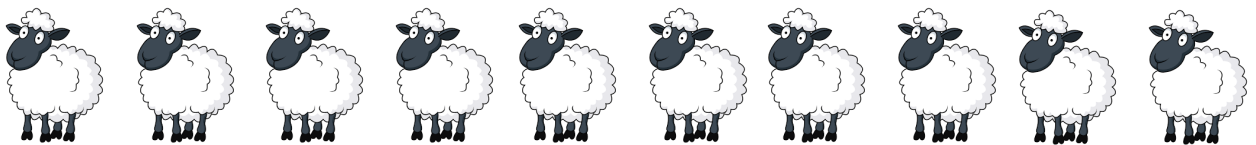

Roll a dice and try and split the large group you have made into that many smaller groups. If you roll a 2 you would need to try and split your large group into 2 smaller groups.

Can you split them into equal groups every time?

What happens if you take some away and then try again?

Explore what different groups you can make by changing the number of the original collection.

1. The farmer can fit two sheep into a pen. How many pens will the farmer need?

2. There are 12 bees in the picture. How many groups of 3 bees are there?
