

This term our topic would be 'Where are we on the food chain?'

We will be looking at lots of facts and interesting things all about the insects and wildlife around us. This will include things such as food chains and habitats.

Thinking about habitats, your task is to create (with the help of one of your grown-ups) to create your very own Bug-Hotel.

This can be as simple or complex as you want it to be.

Watch the clip below that will show you the sort of thing you could build. Remember that yours can be anything you want it to be. Design your hotel first then sketch it out on paper adding labels to explain the different elements and areas.

Then find the materials you will need to build it. Try to recycle and reuse as much of the material as you can.

When you have built your hotel then take a photo of it that we can look at when we come back to school.
